

PCRC PROFICIENCY STANDARDS

(Updated 03/19/2022)

If you are an experienced RC pilot and just need proficiency verification then any of our current club officers (Jason Baker, George Saar, Walt Moore and Paul Dwyer) can assist.

Proficiency expectations will include:

+Demonstrate safety (preflight inspection, observation of surroundings ensuring your and others' safety at all times).

+Demonstrate thorough understanding of aircraft controls, control surfaces, fuel/battery management, and so forth.

+Observing weather and wind patterns to ensure safe flying conditions.

+Perform three (3) unassisted takeoffs and landings within the designated runway area.

+Demonstrate the ability to fly a directed pattern while maintaining consistent flight altitude and proper input controls.

If any training is needed, Walt Moore is our Safety Coordinator and an AMA Introductory Instructor Pilot. Jason Baker is also an AMA Introductory Instructor Pilot. Either of them can help train and get new pilots solo-flight ready.
